

# 01\_Project\_Setup

The screenshot shows the Visual Studio Code interface with the Explorer sidebar on the left. The Explorer sidebar displays the project structure for 'CUSTOMERSUPPORTAUTOMATION', which includes a 'venv' directory. The 'venv' directory contains subfolders 'Include', 'Lib', and 'Scripts', and files '.gitignore' and 'pyvenv.cfg'. The main editor area is currently empty, displaying a large, faint Visual Studio Code logo. Below the logo, there are three keyboard shortcuts listed: 'Show All Commands' (Ctrl + Shift + P), 'Go to File' (Ctrl + P), and 'Open Settings' (Ctrl + ,). The bottom status bar shows the 'TERMINAL' tab is active, displaying a PowerShell prompt. The terminal output shows the command 'venv\Scripts\activate' being executed, and the prompt has changed to '(venv) PS C:\Users\VANSH ANAND\Desktop\CustomerSupportAutomation>'. The status bar also indicates the current shell is 'powershell'.

# Task1\_Workflow

# 07\_Task2\_StateStructure

The image shows a Visual Studio Code editor window with the following components:

- Top Bar:** Menus (File, Edit, Selection, View, Go, Run, Terminal, Help), a search bar containing "CustomerSupportAutomation", and an "Update" button.
- Explorer Sidebar:** Displays the project structure. The "graph" folder is expanded, showing "state.py" as the active file. Other folders include "agents", "database", "diagrams", "execution\_screenshots", "knowledge\_base", "memory", "rag", and "venv".
- Main Editor:** Displays the content of "state.py". The code defines a TypedDict class named "CustomerState" with the following fields:

```
1 """  
2 state.py  
3  
4 Shared state used across every LangGraph node.  
5  
6 Author : Vansh Anand  
7 """  
8  
9 from typing import TypedDict  
10  
11  
12 class CustomerState(TypedDict):  
13     """  
14     Stores all customer information during workflow execution.  
15     """  
16  
17     # Customer Information  
18     customer_name: str  
19  
20     # Customer Query  
21     user_query: str  
22  
23     # Detected Department  
24     intent: str  
25  
26     # Context retrieved from company documents  
27     retrieved_context: str  
28  
29     # Department Agent Output  
30     department_response: str  
31  
32     # Supervisor Final Response  
33     final_response: str  
34  
35     # Human Approval  
36     approval_required: bool  
37     approval_status: bool  
38
```
- Run and Debug Sidebar:** Shows a "BLACKBOX" session with a play button and a "state.py" file icon.

# 08\_Task3\_IntentClassification

The image shows a Visual Studio Code editor window with a project named "CustomerSupportAutomation". The Explorer sidebar on the left displays the project structure, including folders like "agents", "database", "diagrams", "execution\_screenshots", "graph", "knowledge\_base", "memory", "rag", "venv", and files like "app.py", "README.md", "requirements.txt", and "test\_classifier.py". The "test\_classifier.py" file is open in the editor, showing the following Python code:

```
1 from agents.classifier import classify_intent
2
3
4 sample_state = {
5     "customer_name": "",
6     "user_query": "I forgot my account password.",
7     "intent": "",
8     "retrieved_context": "",
9     "department_response": "",
10    "final_response": "",
11    "approval_required": False,
12    "approval_status": False
13 }
14
15
16 result = classify_intent(sample_state)
17
18 print("Detected Intent:")
19 print(result["intent"])
20
```

At the bottom, the Terminal panel shows the output of running the script:

```
Project setup completed successfully.
• (venv) PS C:\Users\VANSH ANAND\Desktop\CustomerSupportAutomation> python test_classifier.py
Detected Intent:
Account
• (venv) PS C:\Users\VANSH ANAND\Desktop\CustomerSupportAutomation>
```

# 13\_Task7\_SQLiteMemory

The image shows a Visual Studio Code editor window with the following components:

- Explorer Panel:** Displays the project structure for 'CUSTOMERSUPPORTAUTOMATION'. The 'memory' folder is expanded, showing files like 'app.py', 'README.md', 'requirements.txt', 'test\_classifier.py', 'test\_memory.py', 'test\_rag.py', and 'test\_workflow.py'.
- Editor Panel:** Shows the code for 'test\_memory.py'. The code imports 'memory.sqlite\_memory', initializes a database, creates a sample state dictionary with fields like 'customer\_name', 'user\_query', 'intent', 'retrieved\_context', 'department\_response', 'final\_response', 'approval\_required', and 'approval\_status', saves the conversation, gets the last conversation, and prints it.
- Terminal Panel:** Shows the execution of the script. The output displays the 'Last Conversation' as a tuple: ('I need a refund.', 'Billing', 'Refund request received.', 'Supervisor approval required.', '2026-06-28 07:32:45').

```
1 from memory.sqlite_memory import *
2
3 initialize_database()
4
5 sample_state = {
6     "customer_name": "Vansh",
7     "user_query": "I need a refund.",
8     "intent": "Billing",
9     "retrieved_context": "",
10    "department_response": "Refund request received.",
11    "final_response": "Supervisor approval required.",
12    "approval_required": True,
13    "approval_status": False
14 }
15
16 save_conversation(sample_state)
17
18 conversation = get_last_conversation("Vansh")
19
20 print("="*60)
21
22 print("Last Conversation\n")
23
24 print(conversation)
```

Terminal Output:

```
(venv) PS C:\Users\VANSH ANAND\Desktop\CustomerSupportAutomation> python test_memory.py
=====
Last Conversation

(venv) PS C:\Users\VANSH ANAND\Desktop\CustomerSupportAutomation>
```

# 14\_Task8\_HumanApproval

The image shows a Visual Studio Code editor window with a project named "CustomerSupportAutomation". The Explorer sidebar on the left displays a file tree with folders like "agents", "database", "graph", "knowledge\_base", "memory", "rag", and "venv", along with various Python files and text documents. The "test\_approval.py" file is selected and open in the main editor.

The code in "test\_approval.py" is as follows:

```
1 from agents.approval_agent import approval_agent, human_approval
2
3 state = {
4     "customer_name": "Vansh",
5     "user_query": "I need a refund for my annual subscription.",
6     "intent": "Billing",
7     "retrieved_context": "",
8     "department_response": "",
9     "final_response": "",
10    "approval_required": False,
11    "approval_status": False
12 }
13
14 state = approval_agent(state)
15
16 print("\nApproval Required:")
17 print(state["approval_required"])
18
19 state = human_approval(state)
20
21 print("\nApproval Status:")
22 print(state["approval_status"])
23
24 print("\nFinal Response:")
25 print(state["final_response"])
26
```

Below the code editor is a terminal window with the following output:

```
(venv) PS C:\Users\VANSH ANAND\Desktop\CustomerSupportAutomation> python test_approval.py
Customer Query: i need a refund for my annual subscription.
